Class landing — Research + Recommended Features Digest (R2)

Date: 2026-09-24 Author: Chief of Staff / Grok Bot (Kelyra) Status: Ready for Chuck review SoT pair: [notes/company/class-landing-research.md](#) · [notes/company/class-landing-plan.md](#) Also keep (unchanged architecture/security/acceptance unless noted): sibling [*-architecture.md](#) / [*-security.md](#) / [*-acceptance.md](#)

This dated file is a readable pack for Chuck. Full detail lives in the SoT pair above.

Top 5 P0 recommendations

1. L0-1/2 — Webpage-like class home with named regions ([welcome](#), [daily_focus](#), [verse](#), [header_title](#)).
2. L0-3/4/5/6 — Live joined blocks: announcements, published dues, calendar slice, files (no duplicated SoT).
3. L0-7 — Link to published lesson-plan focus (not full procedures embed).
4. L0-8 — Signed-in only; hat RLS; twins never mixed; 5th ≠ 3rd.
5. L0-9/10 — AI NL edit of named regions only (Bible verse example) with preview + confirm; no free HTML v1.

Class Landing Research Note (LAND-R2)

Date: 2026-09-24 Author: Chief of Staff / Grok Bot (Kelyra) Status: Ready for Chuck review Revision: R2 (supersedes LAND-R1 / 2026-09-03) Cards: Epic [t_5a34b1ca](#) Access date for URLs: 2026-09-24 (America/Chicago)

Related: Calendar · Lesson plans · (not Diary rebuild) CEO AI example: “Update the Bible Verse for the Fundamentals of Math landing page to Genesis 1:1 (KJV).”

Executive summary

Kelyra needs a webpage-like class home (Canvas Front Page / course home pattern) — not only app menus/tabs. Ideal landing = named teacher-authored regions ([welcome](#), [daily focus](#), [Bible verse/quote](#)) + live joined blocks (announcements, due work, calendar slice, files, optional lesson focus link). Access = signed-in only for taught-class audiences. AI edits named fields only with preview + confirm. Hats: teacher edits; students/parents see own class only; twins never mixed; 5th ≠ 3rd.

v1 cut: Structured landing (not free HTML); live joins; named regions including [verse](#); signed-in WebView/web route; AI NL to named regions; join calendar/plans by reference.

1. Competitor / pattern analysis

Canvas course home

- Home options: Syllabus, Pages Front Page, Modules, Activity Stream. Best practice: custom Front Page or Syllabus with above-the-fold essentials ([welcome](#), [Start Here](#), recent announcements, clear links); reduce unused nav clutter.
- Sources: UMass Canvas Homepages; TAMU course building best practices; UIC Getting Started. Accessed 2026-09-24 (America/Chicago).

Copy: Webpage-like home; announcements + due work above fold; modules/files as links. Skip: Forcing Syllabus-as-home; public anonymous course sites as default.

Google Classroom Stream

- Stream-centric; Classwork tab; calendar dues; guardians get email summaries, not full stream/calendar by default. Drafts/scheduled hidden.
- Source: Classroom calendar. Accessed 2026-09-24 (America/Chicago).

Copy: Simplicity; draft hide. Skip: Stream-only as the only “home” metaphor if CEO wants webpage-like landing; guardian-blind as only parent story.

Schoology course homepage

- Materials/folders + homepage tools/communication; calendar separate but linked.
- Sources: Homepage tools; Materials. Accessed 2026-09-24 (America/Chicago).

Copy: Materials list + homepage widgets. Skip: Full LMS CMS in v1.

Teacher Google Sites

- Custom public/private pages; high maintenance; weak live assignment join.

Copy: Named content regions idea. Skip: Free HTML CMS + public marketing site as taught-class default.

Honest cut

Dominant LMS homes prioritize orientation + recent + dues. Custom Sites supplement. No strong K-12 evidence that anonymous public class pages should be the default for rostered classes (FERPA). Signed-in hub wins for v1.

2. Ideal elements (needed vs clutter)

Needed above the fold (v1)

1. Class display title / header
2. Welcome / teacher note (named)
3. Daily / lesson focus (named)
4. Bible verse / quote (named — CEO example)
5. Announcements (recent, live)

AI NL edit — Bible verse example pattern

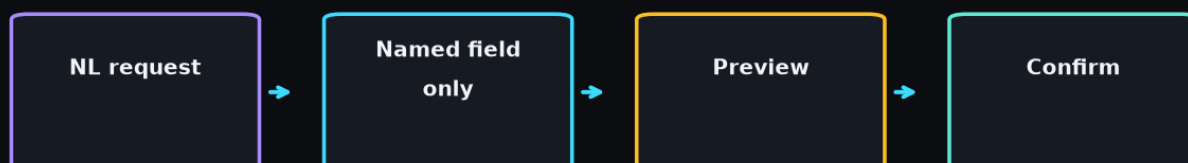

Figure: AI NL edit with preview + confirm.

6. Assignments due today / this week (live, published only)
7. Calendar slice (upcoming, joined)
8. Key files / resources (live list)
9. Optional link to current published lesson plan summary/span

Clutter to avoid

Full announcement history, full syllabus dump, grades/scores, email/phone blocks, unrelated grade noise, heavy hero image CMS, deep nav forks, embedding full lesson plan procedures, twin/sibling content.

Design principle (Canvas best-practice corpus): important content above the fold; fewer paths.

3. Automation model

Kind	Examples	Edit model
Live joins	Dues, announcements, calendar slice, files, plan link	Auto from SoT; respect publish + hat RLS
Named regions	welcome, daily_focus, ...	Teacher text; AI targets these ids
Templates	Layout skeleton per school	Office later; teacher applies

States: draft → preview → publish for authored regions. Live blocks follow source publish rules (hidden quiz never appears).

4. Access

Option	v1?	Why
In-app WebView / native screen	Yes	Phone capture context
Signed-in web route	Yes	Webpage-like on desktop
Public anonymous URL	No	No strong K-12 taught-class evidence; FERPA
Guardian magic link without seat	No	Use parent seat + roster link

5. Hat / visibility matrix

Hat	See	Edit
Teacher (taught)	Full + drafts	Yes
Student (enrolled)	Published regions + live published blocks	No
Parent (child C in class)	Published + live for C's class only	No
Other class / other grade	No	No
Twin sibling class	No on this route	No
Office	No editor v1	No class-create

Fail-closed. Filters on landing do not replace RLS.

6. AI edit model (CEO example)

Prompt: Update the Bible Verse for Fundamentals of Math landing to Genesis 1:1 (KJV).

Flow:

1. Resolve class by taught-class name under teacher seat (disambiguate if needed).
2. Target named region **verse** only.
3. Show preview card: old → new.
4. Teacher Confirm → publish (or save draft).
5. Audit: who/when/field.

Forbidden: free HTML rewrite; other classes; student PII in prompt; auto-publish without confirm; Ask-as-superuser; editing live blocks that aren't named regions (dues come from assignments).

7. Join calendar & lesson plans (no duplication)

Source	Landing behavior
Calendar	Upcoming slice query — join
Lesson plan	Link to published plan / daily focus blurb from parent_summary or daily_focus region — not full procedu...
Assignments	Due list from published assignments
Diary	Not on landing

8. Mobile vs web UX

	Mobile	Web
Layout	Single column stack; sticky header title	Wider; optional 2-col (focus + dues)
Edit	Sheet per named region	Inline + AI box
Live blocks	Compact cards	Tables/lists denser
AI	Ask → preview sheet	Ask → inline preview

9. Needed vs Desired

Needed P0	Desired P1-P2
Named regions incl. verse	Free HTML region
Live dues/announcements/calendar/files	Public marketing page
Signed-in access	Theme marketplace
AI NL named-field + confirm	Student widgets
Hat walls + twin wall	Office schoolwide template push
Join plans/calendar	Embedded grades

Access walls — signed-in only

Figure: Access walls including twins never mixed.

10. Unverified flags

- Exact 2026 adoption stats for Canvas Front Page vs Stream — not invented.
- Whether any large Christian school system publishes rostered class homes anonymously as policy — no primary found; stay signed-in.
- Performance of WebView vs native for rich landing — eng measure later.

11. Open questions for Chuck

1. Is **verse** always present (Christian school default) or school toggle?
2. Parent landing = same page or summary mode? (Plan recommends same regions, published-only.)
3. Announcements SoT = Feed class-scoped or separate?
4. Web route path convention (**/class/:id/home**)?
5. Sequence vs Calendar/LPLAN builds?

RECOMMENDED NEXT ACTION: Review **class-landing-plan.md**; keep architecture/security/acceptance.

Plan / recommended features (full SoT)

Class Landing Plan (LAND-P2 / R2)

Date: 2026-09-24 Author: Chief of Staff / Grok Bot (Kelyra) Status: Ready for Chuck review Revision: R2 (upgrades LAND-P1 2026-09-03) Research: **notes/company/class-landing-research.md** Keep: **class-landing-architecture.md**, **class-landing-security.md**, **class-landing-acceptance.md**. Stack: Expo + Supabase + Edge AI. No app/SQL from this card.

0. Product law

Surface	Job	Not
Class landing	Webpage-like home for one taught class: live joins + named teacher fields	Not app menu alone; not public marketing site; not free HTML v1; not Feed-as-only-home
Named regions	Teacher fields AI can draft into (verse , ...	Not Ask-as-superuser
Live blocks	Dues, announcements, calendar slice, files — joined	Not copies of calendar/plans
AI edit	NL → named region → preview → confirm → publish	Not auto-publish; not silent HTML

CEO bar: webpage-like home; Bible verse NL example; signed-in; hat walls; twins never mixed; link calendar/plans.

1. Non-goals

Non-goal	Why
Anonymous public class URL v1	FERPA; research
Free-form HTML / Sites clone v1	XSS + AI-unsafe
Duplicate calendar/plan bodies	Join only
Class create	Office directory

Non-goal	Why
Widen <code>is_staff</code>	Hat walls
Twin merge	Hard law
Auto-publish AI	Confirm
Grades on landing	Gradebook elsewhere
Diary on landing	Separate epic
App/SQL from this card	Epic scope

2. Needed vs Desired

Needed P0

ID	Feature	Rationale
L0-1	Landing screen (mobile + web) per class	CEO webpage-like
L0-2	Named regions: <code>header_title</code> , ...	AI targets + Christian school
L0-3	Live: announcements (recent)	Orientation
L0-4	Live: assignments due today/week (published only)	Core
L0-5	Live: calendar upcoming slice (join)	Cross-link CAL
L0-6	Live: key files list	Resources
L0-7	Optional link to published lesson plan / focus	Cross-link LPLAN
L0-8	Signed-in only; hat RLS; twin wall	FERPA
L0-9	AI NL named-field edit + confirm (Bible verse example)	CEO
L0-10	Teacher draft/publish for named regions	No auto-publish

Desired P1–P2

ID	Feature	Pri
L1-1	School template defaults	P1
L1-2	Parent summary layout variant	P1
L1-3	Pin files / reorder blocks	P1
L1-4	Free HTML advanced region	P2
L1-5	Public open-house page (no roster PII)	P2 if evidence
L1-6	Student shout-outs widget	P2

3. Hats — stories

Teacher: Open landing from class desk; edit named regions; Ask verse update → preview → Confirm; see live blocks; drafts of own work not shown to families. Student: Read published landing for enrolled class only. Parent: Read published landing for focused child's class; never sibling's page on same route. Office: No editor v1; no class-create.

4. Block inventory

Live (join)

Block	Source	Publish rule
Due work	assignments + due_at	calendar-published / student-visible only
Announcements	class-scoped announcements/feed	class-visible
Calendar slice	list_calendar_items join	hat-visible published
Files	class files readable by hat	no invented ACLs
Plan link	lesson_plans published	hidden if draft

Authored (named)

Figure: L0 Top P0 recommendations.

id	Label	v1
header_title	Display title	on (default class name)
welcome	Welcome / teacher note	on
daily_focus	Daily focus	on
verse	Bible verse / quote	on (may be empty)

5. UI/UX

Web

- Page layout: header → verse/welcome/focus band → two columns (announcements + dues) → calendar strip → files.
- Edit pencil per region; AI box “Update ...” scoped to this class.
- Student View preview.

Mobile

- Single column same order; region edit via sheet; Ask from chrome.
- Calendar strip tappable → Calendar filtered to class.

States

- Empty regions: hide or placeholder for teacher only.
- Empty dues: honest empty.
- Wrong hat: fail closed empty / deny.

6. AI safety

1. Resolve class under taught seat only.
2. Touch only allow-listed region ids.
3. Preview + Confirm.
4. No HTML. No other class. No grades. No roster dump in prompt.
5. Audit log field-level.
6. Bible verse example is a field write, not theology engine — store text teacher confirmed.

7. Implementation approach (pointer)

Per `class-landing-architecture.md` / `class-landing-security.md`:

1. `class_landings` (or equivalent) one row per class: jsonb/columns for named regions + publish timestamps.
2. RLS: teacher write if `class_teacher_of`; student/parent read published if enrollment / child enrollment.
3. Live blocks = existing queries with same publish predicates as Calendar — no denormalized copies.
4. Ask tool `landing_update_region` with confirm payload; new permission — not superuser.
5. Expo: `class/[id]/home` web + mobile screen/WebView.
6. Phases: schema+read → teacher edit regions → live blocks → AI confirm → parent/student polish → templates.

Gate: Chuck send before Eng. Acceptance remains PLAN ONLY.

8. Cross-links

- Research R2; architecture/security/acceptance keep
- Calendar slice ↔ `calendar-plan.md`
- Plan focus ↔ `lesson-plan-plan.md`
- Diary: none

9. Open questions for Chuck

1. `verse` always on for Spring Baptist archetype?
2. Announcements SoT?
3. Parent same page vs summary?
4. Build order vs CAL/LPLAN?
5. Any must-have block missing (practice tests link, etc.)?

RECOMMENDED NEXT ACTION: Chuck review; Eng only after explicit send.
