

Kelyra Production System, Monetization & Go-to-Market

Spring Baptist Academy trial → paid production

Stack · Cost · Deploy · Compliance · Pricing · GTM

Recommended stack

2026-09-24 · America/Chicago

Edition: Dark visual edition · 2026-09-24

Confidential — Chuck Broaddus / Kelyra

Read-only review of ~/projects/kelyra, Company OS, and original research;
web pricing verified 2026-09-23/24. Unverified items are flagged.

1. Executive summary

Kelyra is already a real multi-role school app (Expo + Supabase + Gemini Edge Functions + Ride/LPR), not a slide deck. The gap to a Spring Baptist trial is ops and distribution, not a rewrite: always-on Supabase Pro, a public web host on kelyra.app, store/TestFlight builds, privacy paperwork, monitoring, and a car-line-first packaging story.

Figure: Recommended production stack wordmarks (styled pills; not official logos).

Recommended production stack (keep what you chose)

Layer	Keep / change	Recommendation
Client	Keep	Expo (RN + web/PWA), one codebase
Backend	Keep + harden	Supabase Auth/Postgres/Storage/Realtime/Edge; project aohibokgilxhqwmupdfv → promote to prod; add separate staging
AI	Keep current Edge path	Paid Gemini gemini-3.5-flash-lite via GEMINI_API_KEY (no training on paid tier); xAI Grok for local ai:dev + optional STT
Web host	Add	Cloudflare Pages (domain already on Cloudflare NS; CEO DNS HOLD still in force until you flip it)
Native builds	Finish	EAS Build/Submit/Update; fill missing ios.bundleIdentifier / android.package
Email	Add	Resend (or Postmark) custom SMTP for auth + school notifications
Monitoring	Add	Sentry + Supabase metrics + Better Stack/UptimeRobot; PostHog later
Rasterize worker	Keep	workers/ingest-rasterize as a small always-on container (Fly/Railway/Cloud Run) — not Edge

Cost snapshot (estimates — assumptions in \$4)

Figure: Est. monthly platform cost — Trial \$55-110 · Full school \$90-220 · ~10 schools \$400-1,200 (midpoints with range bars).

Scale	Est. monthly platform cost
Trial (~35 students + teachers/office + subset of parents)	~\$55–110 / mo
Full Spring Baptist (~200 students + families + staff)	~\$90–220 / mo
~10 similar schools (shared multi-tenant prod)	~\$400–1,200 / mo

Recommended pricing (car line as wedge)

Figure: Ride \$1,800 · Classroom \$3,500 · Bundle \$4,500 (or \$8/student/yr, whichever greater).

- Ride module (wedge): **\$1,800 / school / year** (or \$180/mo) for ≤250 students — undercuts secondary reports of ~\$3,750/yr for PikMyKid software-only.
- Kelyra School (full suite): **\$4,500 / school / year** or \$8 / student / year (whichever greater), includes Ride + classroom AI + messaging + gradebook + Author packs for enrolled teachers.
- Spring Baptist trial terms: free through end of spring semester in exchange for case study, testimonial, and weekly office feedback; founding-school renewal at **50% of list for year 1 paid**.

Top 10 actions

1. Upgrade org to Supabase Pro; create staging project; lock spend-cap strategy.
2. Flip CEO DNS HOLD only after Privacy Policy + pilot MOU draft exist; point kelyra.app → Cloudflare Pages web export.
3. Complete EAS identity (bundleIdentifier / package), Apple Developer + Play Console, TestFlight + Play closed testing.
4. Wire custom SMTP (Resend) + paid Gemini billing + monthly AI spend alert.
5. Deploy ingest-rasterize worker to a managed host with secrets (not laptop).
6. Add Sentry + dismissal-window uptime check + Edge error alert.
7. Sign pilot MOU with Spring Baptist; publish Privacy Policy + ToS on kelyra.app.
8. Ship Ride-first onboarding checklist for office manager (vehicles, plates, staff walk photo).
9. Form TX LLC, EIN, bank, Stripe (invoices/ACH) — sell outside the App Store for B2B.
10. Automate release train + nightly usage digest via Company OS (devops-release, finance-analytics, Grok Bot Ship/QA).

Top risks

Figure: Relative severity of top production risks (illustrative ranking from §1).

1. Solo-founder on-call during dismissal window (3:00–4:00 PM CT) if Realtime/LPR fails.
2. Claiming FERPA “school official” without a DPA — private school may not be FERPA-bound the same way; still need contractual privacy.
3. Storage egress already burned Free plan in Aug 2026 — thumbs help; Pro is still required for always-on + parents.
4. Missing store identifiers / no CI promotion path → slow trial installs.
5. Car-line LPR accuracy + parent plate registration friction.

2. Where Kelyra is today (repo + original research)

2.1 What Chuck already chose (Aug 2026 research → architecture)

From research/04, research/06, and docs/architecture.md:

- One TypeScript client: Expo (not Flutter, not Capacitor+separate Next). Mobile = capture; web = dense teacher/office work.
- One backend: Supabase (Auth, Postgres, Storage, Edge, Realtime, RLS). No Nest/Rails in v1.
- AI adapter: Server-only keys. Original default was xAI Grok; research already named Gemini Flash-Lite as cheapest multimodal fallback. Live Edge code prefers GEMINI_API_KEY → gemini-3.5-flash-lite, else xAI. Local npm run ai:dev stays Grok.
- Email: Resend or Postmark (not SMS in MVP).
- Hosting/builds: EAS + Supabase cloud; Apple \$99/yr + Play \$25 once.
- FERPA posture (honest): keys server-side, private buckets, Approve gate, paid API no training — do not claim school-official without DPA.

2.2 Current stack facts (repo, 2026-09-23)

Item	Status
Expo SDK	~57; RN 0.86; web output: static
eas.json	Exists (dev/preview/production + submit) — contrary to older assumption
app.json	Missing ios.bundleIdentifier and android.package (store blocker)
Supabase project	aohibokgilxhqwmpdfv (dev/live combined)
Migrations	144 SQL files under supabase/migrations/
Edge functions	~20+ including ride-lpr, ask-assistant, analyze-homework, lesson-host, ingest-related, etc.
Storage buckets	photos, audio, files, lessons (private); ingest paths
Workers	workers/ingest-rasterize (Docker) + related ingest workers
Web host config	None (no wrangler.toml / vercel.json / netlify.toml)
Domain	kelyra.app on Cloudflare NS (marissa/louis); no A/AAAA records; Company OS DNS HOLD still explicit
Monitoring	No Sentry/PostHog config found in repo
Company OS	kelyra-company-os v0.1.18; Hermes profiles incl. devops-release, legal-compliance, finance-analytics, etc.

2.3 Usage signal (Aug 2026 Free plan — may be stale)

From notes/storage-egress.md (cycle ~13 Aug–13 Sep 2026): Egress 8.62 / 5 GB (overage; mostly Storage), DB ~30 MB, Storage size small (~40–230 MB depending on meter), ~3 users then. S1 thumbs + signed-URL cache landed to cut egress. Current Sept meters not re-read (CLI inspect gated); treat Aug as directional.

2.4 Gaps to production

- Combined dev/live project — no staging promotion path.
- No public web/PWA host or custom domain wiring.
- Incomplete EAS/app identity for stores.
- Rasterize worker not documented as production-hosted.

- No formal Privacy Policy / ToS / pilot MOU in repo.
- No observability / AI spend caps / status page.
- Architecture doc still says “one teacher MVP”; product is already school multi-hat (office, Ride, calendar, messaging).
- Push notifications still soft-skipped in original architecture; car line may want Expo push.

3. Recommended production architecture

3.1 Environments

Env	Supabase	Web	Native	Purpose
dev	Current project or local + personal Free	Expo web / Expo Go	Expo Go / dev client	Dogfood, Build loops
staging	New Pro Micro project	staging.kelyra.app Pages	Internal / TestFlight Internal	School rehearsal, migrations dry-run
prod	Dedicated Pro project (promote current or clone + migrate)	kelyra.app / app.kelyra.app	TestFlight → ASM/MDM or public later	Spring Baptist live

Billing note: One Pro org + 2 Micro projects ≈ \$25 + \$10 + \$10 – \$10 credit = \$35/mo base (Supabase pricing, accessed 2026-09-24).

3.2 Architecture (keep vs change)

Figure: Parents/Teachers/Office/Students → Expo → Supabase → Gemini / Ride / Worker / Pages.

Keep: Expo+Supabase+Edge AI adapter+RLS+Approve gate+private buckets+Ride design.

Change/add: staging project; Cloudflare Pages for static web; production worker host; custom domain; Sentry; paid Gemini; Resend; CI promote; docs ADR restamp for multi-school.

Do not: rewrite to Next.js for trial; public photos/lessons buckets; free-tier Gemini in prod (training + rate limits); claim HIPAA/FERPA school-official on Pro alone (HIPAA needs Team+\$BAA).

3.3 Why Cloudflare Pages for web

- Domain already on Cloudflare NS.
- Static Expo export fits Pages; static asset requests free/unlimited on Pages; Workers Paid only if Functions needed.

- EAS Hosting works but custom domain needs paid EAS plan; Cloudflare keeps web cost near \$0 for trial.
- Vercel Pro (~\$20/user) is fine but redundant if Cloudflare already owns DNS.

4. Capacity & cost model

4.1 Explicit assumptions (estimates)

Assumption	Trial cohort	Full school (~200)
Students	35	200
Teachers + office	5–10	15–25
Parent accounts (unique adults)	40	280
MAU (Auth)	~80	~500
Homework photos/day	40	150
Avg stored size after resize+thumb	0.6 MB / capture set	same
Monthly new media storage	~0.7 GB	~2.5–4 GB
List egress (thumbs)	low teens GB	40–120 GB
Edge invocations / mo	50k–200k	0.5–1.5M
AI: vision jobs / mo	800	4,000
Tokens / vision job (in+out blended)	~8k in / 1k out	same
Dismissal peak Realtime connections	50	250–400
Car-line LPR calls / school day	80	250

Gemini paid Flash-Lite: \$0.30 / 1M input, \$2.50 / 1M output (Google Gemini API pricing, accessed 2026-09-24).
Paid tier: content not used to improve products.

Rough AI \$: Trial: $800 \times (8k \times \$0.30 + 1k \times \$2.50) / 1e6 \approx \$3.9$ + Ask/practice headroom → ~\$8–25 / mo. Full school: $5 \times$ → ~\$40–120 / mo depending on Ask/Author volume.

4.2 Monthly cost tables (estimates)

Trial

Line	Low	High	Notes / source
Supabase Pro (1 project)	\$25	\$35	+staging
Gemini paid	\$8	\$25	estimate
Cloudflare Pages	\$0	\$5	Workers Paid if needed
EAS Free / Starter	\$0	\$19	expo.dev/pricing
Resend	\$0	\$20	Free 3k/mo then Pro
Sentry Developer	\$0	\$26	Team if needed
Uptime / misc	\$0	\$10	
Rasterize host	\$5	\$15	Fly/Railway tiny
Apple Dev (amortized)	\$8	\$8	\$99/yr
Total	~\$55	~\$110	

Full school (~200)

Line	Low	High
Supabase Pro + light overage buffer	\$25	\$60
Gemini	\$40	\$120
EAS Starter	\$19	\$19
Email / monitoring / worker	\$20	\$50
Total	~\$90	~\$220

10 schools (multi-tenant one prod): platform often still <\$1.2k/mo if egress controlled; AI and storage grow roughly with active teachers × homework volume. Prefer one multi-tenant prod + RLS school_id over 10 Supabase projects (10× compute). PITR (\$100/mo per 7 days) and Team (\$599) are optional until paid multi-school / SOC2 demand — not required for private-school pilot.

5. Deployment per platform + tooling to build

5.1 Distribution matrix for Spring Baptist

Distribution matrix — Spring Baptist trial

Figure: iOS TestFlight · Android Play Closed · Chromebook PWA · Mac/PC web.

Platform	Path for trial	Notes
iPhone (teachers/parents)	TestFlight external	Up to 10k external testers; Beta App Review once
Android	Play closed testing track	Play Console \$25 one-time
Chromebook	PWA via kelyra.app (+ optional Android app from Play on ChromeOS)	Prefer PWA for office Chromebooks
Mac / PC	Same web/PWA	Teachers' primary surface
School-managed iPads	Later: Apple School Manager Custom Apps + MDM	After App Review; not required day 1

APK sideload: possible for a few Android devices; avoid as primary (updates, trust).

5.2 Store prerequisites checklist

- Apple Developer Program (\$99/yr)
- Google Play Console (\$25)
- Set ios.bundleIdentifier / android.package / EAS projectId
- Privacy Policy URL + support email
- Camera/mic permission copy already present — keep accurate
- Age rating / COPPA disclosures for under-13 student accounts

5.3 Deploy tooling to build (devops-release owns)

1. GitHub Actions: typecheck → EAS Build (preview/prod) → optional Submit.
2. Supabase: supabase db push / migration apply by filename to staging then prod (matches Company OS rule).
3. Edge deploy: supabase functions deploy per env with secrets matrix (GEMINI_API_KEY, LESSON_HOST_SECRET, SMTP, etc.).
4. Web: npx expo export -p web → Cloudflare Pages (Wrangler) on main tags.
5. EAS Update channels: staging / production for OTA JS fixes without store review.
6. Release checklist: IQG release evidence → Sentry sourcemaps → smoke Ride at 3 PM CT → status page note.
7. Worker: container image CI → Fly/Railway with Supabase service role (never in Expo).

6. Monitoring, metrics, alerts

6.1 Stack

Tool	Role	Pricing note
Sentry	Expo crash/error	Free Developer; Team ~\$26/mo annual
Supabase	DB CPU, connections, auth, Edge logs	Pro metrics endpoint; log drain +\$60 if needed
Better Stack or UptimeRobot	HTTPS uptime kelyra.app + health Edge	Free tiers exist
PostHog	Product analytics	Generous free tier — add after trial week 2
Status page	status.kelyra.app (Better Stack / Instatus)	Optional week 1; recommended before full school

6.2 Concrete alerts (solo-founder friendly)

Alert	Threshold	Window
Edge error rate	>5% of invocations	5 min
ride-lpr failures	>3 in 5 min	Dismissal 2:45–4:15 CT page
Realtime connection errors	spike >2× baseline	Dismissal window
Auth failures	>20/min	5 min
DB CPU	>80% for 10 min	any
DB connections	>80% of pooler limit	5 min
Storage / egress	>70% of plan	daily
Gemini \$	>\$50 trial / >\$150 full school	monthly + mid-month
Rasterize worker down	healthcheck fail	2 min
Web 5xx	>1%	5 min

Car-line SLO (proposed): during Mon–Fri 2:45–4:15 CT, parent check-in → staff queue update p95 < 3 s; LPR attempt success (plate readable + match or explicit no-match) ≥ 90% of registered vehicles. Misses → SMS/email to Chuck + office fallback to manual name call.

On-call reality: You are the pager. Automate: quiet hours except dismissal window; weekend only P0. Company OS operations-support can triage tickets; Chuck owns “is Ride down for real.”

7. Security, privacy, compliance & agreements

7.1 Legal landscape (verify with counsel)

Regime	Relevance to Spring Baptist (private K-12 TX)
FERPA	Applies to schools that receive applicable US Dept of Ed funds. Many private schools are not FERPA-covered the same way — verify with the school. Still treat student records as confidential by contract.
COPPA	If you collect personal info from under-13s, need verifiable parental consent or school consent as agent — design student auth accordingly.
Texas SB 820 / TEC §11.175	Cybersecurity coordinator/policies aimed at public districts; do not assume private schools are in-scope — still adopt good security hygiene.
SCOPE Act (HB 18)	Primarily digital service / social features & minors; review with counsel for messaging/diary surfaces.
SDPC NDPA / TX-DPA	Strong signal for districts; private schools may still ask for a short DPA.

7.2 Checklist — before trial go-live

- Privacy Policy + Terms of Service on kelyra.app
- Spring Baptist Pilot MOU (scope, data use, retention, no paid claim, screenshot rights for case study)
- Google Gemini paid billing enabled (no training)
- Supabase DPA / terms acknowledged (Pro)
- Cloudflare, Resend, Sentry DPAs/terms as needed
- Parent notice / consent language for Ride plates + student photos
- Data retention: Ride stills / LPR crops retention period (align with school — e.g. 7–30 days)

7.3 Checklist — before paid launch / multi-school

- TX LLC + EIN + bank + insurance (cyber + E&O)
- Optional SDPC / TX-DPA template
- Supabase Team only if SOC2 report / HIPAA needed (HIPAA add-on + BAA — overkill for typical K-12 grades unless PHI)
- Vendor security questionnaire pack
- Subprocessor list

Apple/Google developer agreements: accept; for B2B school site licenses sold via invoice/Stripe outside the app, IAP is generally not required under classic “reader/B2B” patterns — confirm current Apple US anti-steering / Epic-related rules with counsel before any consumer parent subscription inside iOS.

8. Monetization

8.1 Comparable pricing (sourced / secondary)

Product	Model	Public / reported price	Source quality
PikMyKid	School license; parent app free	FAQ: quote-based; secondary blog ~\$3,750/school/yr	FAQ primary; \$ figure secondary
SchoolPass	Modules / quote	Not published	Primary sales-led
PickUp Patrol	Enrollment-based quote	Not published	
StudentDismiss	Flat dismissal	\$399/school/year published	Competitor site
Seesaw	Schoolwide	Free starter caps; paid often ~\$2.5k+ / ~\$7.50–\$11.95/student/yr (secondary)	Mixed
ClassDojo	Freemium	Core free; Plus ~\$59.99/family/yr	Primary-ish
MagicSchool / CoGrader	Teacher SaaS	~\$8–\$15/user/mo	Primary pricing pages (Aug research)

8.2 Packaging options compared

Model	Pros	Cons
Per-student / yr	Scales with size	Harder PO; feels like nickel-and-diming Christian schools
Per-school site license	Easy PO; matches PikMyKid	Leaves money on table at large schools
Freemium teacher → upsell school	Growth	Weak for Ride (needs whole-school office)
Modular (Ride / Classroom / Author)	Wedge clear	Billing complexity
Author marketplace rev share	Long-term upside	Not year-1

8.3 Recommendation

Recommended packaging		
Kelyra Ride	Classroom	Bundle School
\$1,800 / school / year Wedge · ≤250 students +\$6/student above 250	\$3,500 / school / year Capture · AI · gradebook messaging · calendar · diary	\$4,500 / school / year Ride + Classroom or \$8 / student / yr (greater) Best value · founding 50% Y1

Figure: Sell modules with a school site license — Ride / Classroom / Bundle.

Sell modules with a school site license:

1. Kelyra Ride — \$1,800/yr (≤250 students); +\$6/student above 250.
2. Kelyra Classroom (capture, AI, gradebook, messaging, calendar, diary) — \$3,500/yr or \$8/student/yr.

3. Bundle School — \$4,500/yr (≤ 250) = Ride + Classroom; founding discount available.
4. AI credits: included soft cap (e.g. 5k vision jobs/yr); overage \$10 / 1k jobs — protects Gemini bill.
5. Author packs: free for trial teachers; later 70/30 creator split (TpT-like) — park marketplace until 5+ schools.

8.4 Spring Baptist trial terms (recommended)

- Free through end of spring semester (or 90 days, whichever longer).
- School provides: office champion, weekly 20-min feedback, permission for anonymized metrics + named case study after success.
- Kelyra provides: onboarding, priority Ride support during dismissal, no marketing spam to parents.
- Conversion offer: **50% off Year 1 Bundle** if signed within 30 days of trial end; thereafter list.
- Data export / deletion on request within 30 days if they walk away.

9. Billing & business setup

Step	Detail
Entity	Texas LLC (or existing)
Tax ID	EIN
Banking	Business checking
Payments	Stripe Invoicing + ACH (schools hate cards for \$4k). Card ~2.9%+\$0.30; ACH lower
Procurement	W-9, COI (insurance), vendor form, sometimes ACH voided check
Sales tax (TX)	SaaS often treated as data processing — 80% of charge taxable per Comptroller pubs; confirm with CPA. Private schools may have exemption certificates — ask.
App stores	Do not put school license IAP in-app for B2B; sell on web/invoice. Parent consumer subs later = revisit IAP rules.

Budget to form + bank + basic insurance: ~\$500–2,000 up front (estimate; insurance quotes vary).

10. Markets, GTM, branding – first 90 days

10.1 Segments (priority order)

1. Private / Christian K-12 (Spring Baptist archetype) – office owns car line; less SIS bureaucracy.
2. Small charter / classical schools.
3. Homeschool co-ops (lighter Ride).
4. Individual teachers (Classroom only) – acquisition funnel, not Ride wedge.

10.2 Market size (sourced)

- NCES PSS 2023-24: 30,553 US private schools; ~5.1M students (NCES / IES, accessed 2026-09-24).
- Texas private + ACSI member counts: not computed in this pass – filter PSS public-use file when needed.
- ACSI / TEPSAC / TAPPS networks = conference + referral channels.

10.3 Buyer personas

Buyer	Pain	Message
Office manager	Chaotic car line, radio chaos	"Parents announce; staff see the next car; plates help."
Head of school	Safety + parent satisfaction	"Accountability log who picked up whom."
Teacher	Grading / homework pile	"Photo → draft → Approve."
Parent	Waiting / uncertainty	Free parent app; clear status.

10.4 90-day GTM

Figure: Days 1-30 / 31-60 / 61-90 GTM phases.

- Days 1-30: finish prod stack; pilot MOU; Ride go-live; weekly office huddle; capture before/after dismissal time (stopwatch).
- Days 31-60: add 1-2 teacher Classroom cohorts; draft case study; 2-min demo video; one-pager PDF; simple kelyra.app marketing page.
- Days 61-90: outreach to 20 Houston-area Christian schools; TEPSAC/ACSI contacts; LinkedIn posts; ask Spring Baptist for warm intros; trademark search.

10.5 Branding basics

- Logo: you already have splash/mark work in-app — freeze a clean wordmark for web.
- Trademark: USPTO electronic filing ~\$350 per class (TEAS Plus retired; fee schedule changed 2025) — search first; file when name sticks.
- Budget 90 days marketing (excluding salary): ~\$200–1,000 (domain already owned; video DIY; conference later).

11. Step-by-step plan

This week (Chuck + CoS)

#	Action	Owner suggestion
1	Decide prod vs staging project split; upgrade Pro	Chuck + devops-release
2	Enable Gemini paid billing; set budget alert	Chuck
3	Draft Privacy Policy + Pilot MOU skeleton	Chuck + legal-compliance (flag counsel)
4	Add bundle IDs to app.json / EAS	senior-developer via qa-loop
5	Inventory Ride readiness at Spring Baptist (plates, staff devices)	Chuck + school office

Before trial go-live

#	Action	Owner
6	Cloudflare Pages deploy; CEO unparks DNS	Chuck + devops
7	TestFlight + Play closed builds to champions	devops + Chuck
8	Resend SMTP; Sentry; uptime check; dismissal alerts	devops
9	Host ingest-rasterize in cloud	devops
10	Sign MOU; parent notice for Ride	Chuck + school
11	Rehearsal dismissal (empty or staff cars)	school + Chuck

During trial

#	Action	Owner
12	Daily dismissal health watch (automated)	ops automation + Chuck P0
13	Weekly metrics digest (pickup times, AI \$, errors)	finance-analytics + PostHog later
14	IQG / QA on critical defects only	qa-supervisor / Kelyra QA
15	Capture quotes + timing data for case study	customer-success / Chuck

After conversion

#	Action	Owner
16	Stripe invoice + ACH; W-9	Chuck
17	Paid Bundle Year 1 at founding rate	Chuck
18	Case study page; 20-school outreach list	growth-marketing
19	Consider Team/SOC2 only if RFPs demand	Chuck

Scale (3–10 schools)

#	Action	Owner
20	Multi-tenant hardening + admin school switcher	architect + eng
21	Status page + light on-call runbook	devops

#	Action	Owner
22	Optional R2 for media if egress bites	architect
23	Conference circuit (TEPSAC/ACSI)	Chuck + growth

12. Automating with Kelyra Company OS

Map recurring production work to existing Hermes profiles / Grok Bot agents:

Figure: Recurring jobs mapped to Company OS profiles / agents.

Recurring job	Profile / agent
Staging→prod migrations, Edge deploy, Pages, EAS	devops-release (+ Grok Bot Kelyra Ship)
Release IQG / prove-out	qa-supervisor → qa-engineer (+ Kelyra QA)
Market / competitor one-pagers	research-feedback or Grok deep-research / kelyra-product-research → file note → strategy or finance-analytics
Pricing arithmetic from filed notes	finance-analytics
Privacy/ToS review of filed drafts	legal-compliance (then human counsel)
Campaign copy from approved brief	growth-marketing
School onboarding checklist	customer-success
Support triage	operations-support
Security threat questions	security
Spend / ARM gates	ai-resource-manager
Orchestration	chief-of-staff

Propose new routines

1. Nightly cost/usage report — script pulls Supabase usage + Gemini \$ → kanban note; finance-analytics summarizes Mondays.
2. Dismissal-window health watch — cron 2:40–4:20 CT weekdays: ping Ride endpoints; on fail page Chuck.
3. Weekly trial metrics digest — WAU, Ride check-ins, median pickup, Edge error %, AI \$.

4. Release train — Thu cut to staging; Fri QA Supervisor evidence; Mon prod (devops only).
5. DNS/secrets change cards — always CEO sticky; never auto.

Must stay Chuck decisions

DNS unpark; spend >\$100/mo new vendor; legal claims (FERPA school-official); production data deletion; pricing locks; signing MOU/contracts; App Store “submit for review”; force-push / prod destructive SQL.

13. Open questions for Chuck / Spring Baptist

1. Trial start date and whether Ride-only week 1 or Ride+Classroom together?
2. Will Spring Baptist provide school consent for under-13 accounts, or parent-only student access?
3. Retention period for Ride walk photos / LPR crops?
4. Devices: office Chromebooks only, or staff phones for walk photo?
5. Any existing dismissal vendor contract to replace?
6. Is the school FERPA-bound (federal funds)?
7. Preferred invoice entity name / who signs MOU?
8. OK to use anonymized timing data publicly in a case study?
9. Promote current Supabase project to prod, or fresh prod + migrate?
10. SMS for car-line exceptions (Twilio) — yes/no for v1? (Email/push may suffice.)

Could not fully verify in this pass

- Live Sept 2026 Supabase usage meters (CLI inspect gated).
- Exact PikMyKid / SchoolPass / Pickup Patrol quote prices (sales-led).
- Whether Spring Baptist receives funds that trigger FERPA.
- Texas private-school & ACSI counts (need PSS microdata filter).
- Current Apple US IAP anti-steering details for every B2B edge case — use counsel.
- Gemini exact RPM/TPM for your paid tier (console-specific).
- Twilio A2P registration timeline if SMS added later.
- Whether ingest-rasterize is already hosted anywhere beyond Chuck's machines.

End of report. · Dark visual edition · 2026-09-24 · Confidential — Chuck Broaddus / Kelyra
